COMPOUND LIBRARIES

Compound Libraries is a set of groups of biologically active specialty chemicals placed in 96-well plates or 8-well strips in equimolar solution. Each library includes:-

- A unique collection of small molecules including inhibitors, activators and/or inducers.
- Complete documentation set that highlights activity descriptions, plate positions, physical information and a structural database (SD) file.
- The ability to re-supply individual bulk compounds, custom libraries, or hard to source compounds.

Benefits:

- An easy, ready-to-use alternative for compound screening.
- Saves time in sample preparation.
- Saves money because the potential activity can be determined before large monetary investments in chemical purchases are made.
- Most libraries comes in a ready-to-screen format in biocompatible solvents so no reconstitution needed.
- Individual compounds are also available for re-supply.

The standard volume of below compound libraries is 100 or 500µl per well.

MINI COMPOUND LIBRARIES

The purpose of Mini Compound Libraries or Drug Discovery Kits is to provide you with small samples of many of our specialty chemicals at a price that is affordable. Our delivery system is 100 microliters of a 1mM solution dissolved in 100% DMSO. These 96 well plates can then be used directly to test your research system, they can be diluted for a variety of concentration trials or they can be added to cells that have been grown in another location.
